SUSANNAH. Sweater than the sweetest manage Lovely, lively, chaste Susannah You're the girl that still I muse on, You're the girt that still I muse on,
Pretty little smiting Sussan.
Oh, if verses can amuse ye,
Fairest, sweetest, hughing Susy,
Pd write on, hut not recheke ye.
Haudsone and good-natured Suky,
Bretzy rhyme world flatter yee,
Every rhyme world flat

BOMESTIC.

(From the National Gazette)
AMERICAN SILK -[No. 111]

If there is a nation that has reason to be proud of what she has achieved in less than fifty years, it is the "RETUBLIC OF THE UNITED STATES." In that short space of time she has changed the face of the world morally and physically; morally, by solving the great-est and most difficult political problem that ever engaged the attention of ancient and modern philosophers, by giving to the world the first example of a great nation self governed—an example which other nations, after wading through torrents of blood, have not yet been able successfully to imitate, though its principles have been making such progress in Europe, that under the name of liberalism, they have materially changed the systems of their governments, and futurity is big with further changes, all proceeding from the great example given by this country. I need not add, that the American Continent is studded with Republics that owe their existence to the same glorious example. tion of the power of steam to navigation has produced the physical change, which has brought the most distant countries almost in contact with each other. Thus the world is full of the glories of this illustrious nation -There is no exaggeration here, it is the simple truth which every eye must perceive and every mind must

comprehend.
With such immense advantages what nation would not be contented? But there are men among us who are not satisfied that their country should be maxima in mazimis! They will have her to contend with silk reclers and silk throusters for superiority in their arts!-That we should be ignorant of those arts, is not asto hishing, as we have never had the opportunity of learning There are also, I am sorry to say, those who speculate upon that ignorance, careless of the good of their The method they employ for that purpose is to flitter the Sovereign people, as countries flatter their monarchs—they know that all Sovereigns are open to fattery. The Emperor Napoleon was told by his courtiers that he was omnipotent; he believed it and he fell. We are told by our flatterers that we are omniscient. Let us

take care how we believe them.

Young nations are like young men: their spirits are buoyant and their blood flows rapidly in their veinsthey are atraid of nothing; they do not stop to examine the obstacles in their way; they fly at once to their ob-ject, reach it sometimes by dint of boldness, and if they fail they begin again. Thus we have tried in various ways to naturalize the culture of silk among us; before the Revolution we pursued this object by wise measures, because we were yet in a state of minority, and were directed by our experienced guardians; but since we have put on the toga virilis, off goes Phaton with his chariot; he knows the way; no fear, no danger - but there is danger, not indeed of breaking our necks, but of failing in a most glorious enterprise, and being obliged to begin again.

So we are going at present in our ill calculated attempt to introduce the culture of Silk into this country; we have acquired some knowledge and some experience within the last ten years; but it is not yet sufficiently diffused, and the reign of the Phatons is not at an end We had still less knowledge and less experience about the year 1526, when the S.Ik excitement came from Europe into the United States We had forgotten all that was done by our ancestors in Georgia and Pennsylvania We had forgotten all that as if it had never existed. We had only Connecticut before our eyes, where an inferior kind of silk was made by means of rude instruments. We knew that that silk was not equal to that which we imported from Europe; we ascribed it to the imperfection of the machines, not ignorance of the art. Some of us had heard of the Piedmont reel; it was thought that it would supply all the defects; a few of these machines were imported. when they came there was no one who knew how to make use of them. To this day they are only shewn as objects of currosity. There is one in the possession of the Franklin Institute in this city; I do not know of It may be seen there by the curious.

This simple fact shews that we are not yet far advanc ed in that branch of knowledge, without which it is im possible that the culture of silk can ever be profitable to this country. In vain we shall plant mulberry trees, in vain we shall rear silk worms and produce cocouns, unless we take the proper measures to bring them to a pro fitable use

The subject will be pursued in our next number.

Monus Multicaulis - The Norristown Herald states that some sales of these trees at 25 cents each, deliveraele in the fall, have been made in that neighborhood but growers now refuse to sell at that price ence to this subject, our friend Morris, of the "Silk Far mer." published in Philadelphia, cays:

"The sale of the multicaulis trees has been very ac tive during the present week. Purchasers are ready to take any quantity at 25 to 35 cents. On the 9th and 10th instant, the editor sold 150,009 trees at 30 cents each ball cash, and the balance satisfactorily secured at three and four months from delivery. These trees are grown by us, near Camden, and promise to be very fine are part of a lot containing about 200,000, the balance of which are held at 40 cents."

SILK CULTURE .- Several samples of Georgia Silk have been shown us this season. One raised by J Durden, Esq. of Morgan county, has been sent us for exhibition. These samples show what was equally well exhibition. These samples show what was equally known before—that Georgia is a fine climate for rearing of silk, and that its quality when raised, will equal any in the world. In another respect they are equally deficient; they neither set forth the value of the when raised, or the cost of the labor necessary to raise a given quantity. [Milledgeville Federal Union, July 16.

(From the Petersburg Intelligencer)
THE CHOPS.
The prospects, at present, are in favor of the labors of the husbandman being this year as abundantly rewarded as in any former year. The Wheat crop generally, through the State, is most abundant, though, in this im mediate vicinity, it has suff-red materially from the attacks of the chinch bug. The Oat erop every where has succeeded. A larger and better yield of Oats, was never known in Virginia. The Corn crop presents a most promising appearance, and with weather tolerably favor able, will fill the granaries of the farmer to overflowing The Tobacco crop bids fair to be as large as any ever raised in the State; the plants every where are thriving, and nothing but a long-continued drought can disappoint the hopes of the planter Lastly, the Cotton crop is said to be in a fair way in Virginia, while in the South it promises a larger yield than has been known for years. MORUS MULTICAULIS IN THE SOUTH.

We take from the Key West Floridian, the following article on the subject of the Silk Culture—a branch of labor which, in the Southern country, bids fair to absorb all other interests, scarcely excepting the great staples of Cotton and Tobacco. The crops of Morus Multicaulis this year, in this vicinity, and, from what we can learn, elsewhere, have generally fallen far short of that abundant crop, which from the fruitful nature of the plant, we were reasonably led to expect. Whether this falling off is attributable to a bad season, (hardly to the season, for vegetation of all kinds is this year as luxuriant as we have ever seen;) or to the fact that, in the rage for speculation in the article last fall, spurious trees and buds were imposed upon the purchasers; or whether the trees were planted too late or too early, we do not undertake to decide One thing is certain, the crop has failed, and we should not be surprised if trees this year commanded prices fully as high as those of the last. We are confirmed in this opinion by the fact, that many persons have already commenced raising and feeding worms, and who must of necessity, obtain the trees. In the county of Bruns wick the culture of Silk seems to have been entered into with great zeal. The following gentlemen are the larg est operators, of whom we have heard: Mr. John L. Wilkins, Jr., has raised between 2 and 300,000 trees; Mr Thos. Hicks has about 50,000; the Brunswick Silk Com pany about 50,000; and 6thers in the county own together between 2 and 300,000 tiers. The Silk Company has a large Cocoonery prepared, and will commence raising Silk as soon as their stock of trees is complete. Mr. Hicks also has a Cocoonery, and has this year fed successfully a large number of worms. The enterprise of these gentlemen is an indication of what we may, in a short time, expect from the silk culture in Virginia which is admirably adapted to the growth and culture of this great staple. We have been in formed by a gentleman conversant which cheaper that Cocooneries can be erected on a much cheaper that Cocooneries can be erected on a much cheaper scale than those which are recommended by the Manuals. All that is necessary is to have a building which can be well ventilated, and which will effect ally shelter the worms from the weather. He also tells us that many persons have erred in beginning to raise the worms before they were properly supplied with the trees. Against this error we caution those who may in-

tend embarking in the business: "Speculation in Silk, Mulberry Trees, and Silk Worms' Eggs.—As all species of the silk mulberry tree can be propagated and multiplied with much greater facility.

and to a much greater extent on the poorest soils in a tropical climate, then they can be increased during the same period, with the greatest care, on the richest soils in the intemperate climate of our Northern States, it is the intemperate climate of our Northern States, it is not surprising that Yankee speculators have taken to fall, as sufficient buildings are not yet prepared. Coba the cuttings of Morus Multicaulis, and have realized great profits by sending their progeny back to the Northern cities for sale. As an experience of six years has demonstrated that the Morus Multicaulis dies grow more luxuriantly on the most arid islands of tropical Florids-and as the speculative prices of of tropical riorius—and as the special the cuttings will likely continue another year, the residents of these keys have now the opportunity of participating in a speculation which may bring them more money than the whole amount of wrecked goods on the Florida reef the ensuing year. But to en sure their due share of the profits at the highest prices it is requisite that the work of propagation and multiplication of the Morus Multicaulis should be immediately begun, and that every individual should avail himself of the best means of multiplying these trees in the shortest time and to the greatest extent. That the labor thus employed cannot possibly be lost, even if the plants should not all be sold, may be shown by the facts, that an acte will yield at the least five thousand pounds of leaves each crop, and at the least two crops a year and that at this rate, they will be as profitable for fodder for cows to convert into milk, as they are for food for worms to convert into silk, and that for either purpose, the traces on the trees are worth 25 cents per hundred pounds,

equal to \$25 annually for the nett crop in the field all is desirable, however, that all residents of Florida be apprised of the fact that the Morus rubra, or native nuiberry of the Cape, is at least as valuable for food for silk worms as the Morus Multicaulis is; that it has an astonishingly rapid growth on all of these acid islands: that its leaves, of the same size, weigh from farty to fifty per cent more than the Morus Multicaulis. green, and eighty to a hundred per cent when dry! and that it is used both in Persia and China for the culture of silk The great size of the leaves of some branches of the native a u berry is so semarkable, that it has actually been mistaken for Morus Mult caulis, and hence it is to be hoped that Floridians who propagate the exotic species

ill cultivate the indigenous species also
"In connection with this subject, we will suggest a new speculation, which may profitably be norsued by even the women and children of the Florida keye: we allude to the rearing of silk worms' eggs for sale in the North There they generally obtain but one crop in a year, but here we can obtain, at the least, six crops of the eggs in the same time. One moth deposites from 3 to 400 eggs; say, that only 100 couples of moths are preserved for procreation, the second crop will be from 30 to 40,000. eggs; of these, 10,000 couples will yield from three to four millions for the fourth crop; 30 to 40 000 millions of eggs for the fifth cross, and three to four billions of the sixth crop-all within one year, from a single moth! On a reference to the advertising columns of the silk periodicals, we find that the eggs of the silk worm vernment, an answer to which could not have been reare as regular an article of sale as the buds of the Morus Multicaulis; and indeed, for the bona fide culture of silk the eggs are as necessary as the trees; and the demand of a supply of both must be equally great, and continue equally long. We do know, that eggs of one variety of silk worm, hatched at Indian Key, on the 25th of March last, produced worms which ascended to spin their co coons in 25 days afterwards; that in 12 or 14 days after wards the moths issued from their cocoons, and that the eggs laid by these moths were hatched in 12 or 14 days thereafter; so that, in 7 weeks from the hatching of the first eggs, the second crop of eggs were also batched at the natural temperature of the atmosphere. The worms proceeding from the second crops of eggs, are divided into two portions, the one being fed on the leaves of the Morus Multicaulis, and the others, on the leaves of the native Mulberry, the result of which we shall commu-nicate to the public. We conclude by saying, raise the silk Mulberry trees-raise the silk worms' eggs!

NEW KIND OF WHEAT .- The Charlestown, Va Press says that "a new kind of wheat, of superior quality, and which yields much more abundantly than any his raised in that county, has been cut the present harvest on the farm of Mr John Wysong, near Shepherdstown. W. obtained the seed from Mr. Stonebraker of Maryland, who became in possession of a small quantity by accident, two or three years since. From three bushels and three pecks sown by Alr. W on ground not the most favorable part of his farm for wheat, he will, it is thought, have a yield of at least 125 bushels - some competent judges say 150 bushels. The heads are very his foot slopped, and the force of the water was fast carriege and contain many more grains than the heads of rying him towards the cutstact when he was caught, and wheat now generally grown in Jefferson county. It attracts much attention, and is evidently a new and very superior kind of wheat, well worthy the attention of farmers In a favorable season, and land not unfavorable to the production of wheat, it is believed it will al-ways yield from 40 to 50 bushels per acre."

On the above, the Baitimore American remarks: We have received some additional particulars respecting this new kind of wheat. It is called the Rock Wheat, from the circumstance, that some two or three years ago a single head of wheat, of peculiarly large size and product was seen growing by itself from the crevice of a rock in a wheat field. The head was carefully preserved and the grain sown, and from it has been pro few parcels which were sown last year by different gen tlemen. Two of these pare is found their way to Bat timore, and on account of their remarkably fine quality and the accompanying assurance of their productive character, were bought for send at the rate of three dol-lats per bushel. They were sown in the vicinity of our city early in October last, and we are now enabled to state the result of the experiment as made by one of the gentlemen, Mr Juel Vickers. Three and a half acres experience of their first season. The accommodations of rich, well prepared ground, have been found to pro duce at the rate of forty-secon bushels to the acre. The of visiters, extensive additions have been made to the quality of the grain is excellent, and many of the heads buildings, and the whole establishment otherwise imwere found to contain fully five grains of wheat. Al-though it is admitted that, when the character of the land and the favorableness of the season are considered. ordinary grain would have produced a full yield, yet the extraordinary product just stated in the case of Mr. Vickers, as well as in that quoted from the Charles town Press, proves that the Rock Wheat is a valuable species, and well ments the notice of wheat growers.

Discovery of Mummies at Darango, Mexico. - A million of Munimes, it is stated, have lately been discovered in the environs of Durango, in Mexico. They are in a sitting posture, but have the same wrappings, bands and ornaments of the Egyptian. Among them was found a pomard of flint, with a sculptured handle, chaplets, necklaces, &c., of alternately colored heads. fragments of bones polished like ivory, fine worked else-tic tissues, (probably our modern India rubber cloth.) moccasins worked like those of our Indians to day, hones of vipers, &c. It remains to continue these interesting researches, and America will become another Egypt to antiquarians, and her ruins will go back to the oldest periods of the world, showing doubtless that the ancestors of the Montezumas lived on the Nile, and that their luxurious civilization was broken up and overpowered by the hardy hordes of Asiatic Tertars, who came down from Behring's Straits and the Rocky Mountains. The scenes of Atilla and Alaric in Reme and Greece, were rehearsed at an earlier day on the shores of California and the plains of Mexico. It is unknown of the Mummies above mentioned what kind of embalmment was used, or whether it was nitrous depositions in the caves where they were found. A fact of importance is stated that the shells of the necklaces are of a marine shell found at Zacatecas on the Pacific, where the Columbus of their forefathers probably therefore landed from the or Chinese coast, or from islands in the Indian ocean .- Texas Star.

MAGNETIC MACHINE -A few days since we called the attention of our readers to a successful application of the power of Electro Magnetism to the movement of machinery, in an engine now in operation at No. 58, Gold street. We intend in the course of a short time to prepare an article on this subject, descriptive of this invention, both on account of our desire to promote what we believe to be an important discovery in the arts, and to furnish entertaining and useful information to those who have not an opportunity of witnessing this inter can, to call and examine this machine, which is shown gratuitously to the public daily as above.

The experiments which have now resulted successfully in the movement of a wheel five feet in diameter, are quite new, and different from the machines, or small models, shown here two years since, which we then com-mended to the favor of the public, believing that something useful would grow out of this new power of Elec-tro Magnetism, and it is gratifying now to know that we are not likely to be disappointed

The Electro Magnetic Company, to whom is due the credit of bringing forward this invention, is an incorpo rated association, with an authorized capital of \$500,000. They have done much already, and now propose to dispose of a limited number of shares of the stock, on ad vantageous terms, (the par value being \$100 each.) to enable them to build machines for moving printing press-

es, &c .- N Y Star. EPISCOPAL HIGH SCHOOL NEAR ALEXANDRIA - We rejoice to learn from every quarter, that the plan of a High School, to be conducted on the principles contem plated, and located in the vicinity of the Theological Sem inary, meets with universal favor. There is scarcely a situation in the country so commanding, so airy, health ful and retired. In saying this, we make all due abate ment on the score of long personal attachment to the beau ward High School, as we hope from the fragrance of the such that it will admit of any improvements which may be found necessary to put upon it. We have no manne of doubt, that if it be managed with only ordinary skill, the School will be furnished with more pupils than be accommodated. Respecting those youths who shall be so fortunate as to go there, we desire that while they recline beneath the shade of that tree which, tradition ays, was planted by the hand of Washington, they will inhibe his spirit, acquire his magnanimity, and be as distinguished as he was for purity of life and piety of

A committee, appointed by the Board of Trustees, and consisting of Bishop Meade, the Rev. Edward C. the PRINTING BUSINESS. A knowledge of the En McGuire, the Rev. George Adie, the Rev. Mr. Dana, glish language is indispensably necessary. and Mr. Cassius F. Lee, met in Alexandria, on the 121 .

determined that, except in particular circumstances, of which the Principal is to be judge, none be admitted under the age of fourteen—that satisfactory testimonials be furnished of their orderly conduct and good character-that the sum of two hundred dollars per annum be

charged for board and tuition, a mattress, &c., being furnished by the guardian.

As Bi-hop Meade is about to visit some of the most approved institutions of the kind in the Northern States, in order to derive every useful lesson from their example, it is requested that all further communications may e made to the Rev. William Pendleton, who is to conduct the institution; and who is now at Newark Col lege. Delaware. All the applications intherto made will be placed in his hands. He will be ready to answer any inquiries relating to the terms of admission, or the course of studies. No definite action having been taken as to the terms upon which young men who are desirons to enter the ministry, or the sons of clergymen may be admitted, this is left for the present with Professor Penaleton, who will receive applications from such [Southern Churchman.

THE LADIES OF EASTPORT.—The "Sentinel" speaks warmly and justly in praise of the ladies of Eastport. Their exertions were arduous in the extreme during the late fire, and they toiled to the end to save their property

from the devouring element:

"The natural timidity of the sex seemed to be laid aside, and they worked with a zest and order which would have well become a few of the lookers-on of the other sex. We saw them carrying in their arms to places the loads which on ordinary occasions would stagother sex. We saw them carrying in their states to place of safety, loads which on ordinary occasions would stagger a laboring man. They were in the very midst of the scene of destruction, packing goods in boxes. &c., and removing them, while the flames were bussing through the sides of the buildings in which they were engaged; and might be seen carrying barrels, bexes and bales of goods, when the brands were falling like hail around them, and the smoke almost sufficiently. The clothes of many of them were several times on fire -When the fire had been subdued, they might be seen in all directions, distributing coffee to the weary and thirsty men. Altogether, they exhibited a strength of bedy and a fearlessness of spirit truly astonishing-and but for their valuable assistance, a large portion of the goods saved must have been inevitably destroyed."

THE BOUNDARY NEGOTIATION .- We copy the follow ing from the London correspondence of the Quebec Gazette, under date of June 12. The statement is not obviously reconcilable with the facts already known, that a distinct with the facts already known, that a distinct proposition for a new joint commission of exploration

ceived at the above date:
"In think you may take it as certain, that a special convention has either left this country, or will speedily be sent to America, for arranging the basis of a retterment of the disputes with the Government of the U. States relative to the boundary question. Her Majesty's Advocate. Sir John D. dson, has, for some time, been engaged in drawing up this convention, and which, I am told, is in strict conformity with the instructions sent to the American Minister at our Court The other mentioned facts, I am not at liberty, at present, to communicate, but I think the knotty point is in a fair train of ar-

Sea Serpent arrived .- Two respectable men of Chelsen, Thomas Woods and Joseph Pratt, who hitherto have been incredulous of the existence of the Sea Serpent, declare solemuly that they saw the monster himself on the morning of the 4th inst as they were in a boat lishing between Chelsea and Nahant. They had opportunity to view him carefully, and sailed nearly around him before he disappeared. They estimated his length at from 100 to disappeared. They estimated his length at from 100 to 120 feet. Helman has since had two or three beats on the look-out - Boston Traveller.

DARING ESTERPRISE - We learn from the Ningara Chronicle, that a few days ago, Messts. Lewis and Heberton of Philadelphia, accompanied by Messis. Winn and Kembeil, after having ventured under the Great Fails of Niagara to the extremity of Termination Rock, attempted to walk the rapids abave the Falls Mr Heberton took the lead, but had not proceeded for when rying him towards the cataract when he was caught, and saved from a dreadful death by Mr. Lewis, sustaining little injury beyond the fright and a few bruises on the hands by clutching at the rocks.

Office Exchange Cank of Virginia, ? Richmosp, July 15, 1839. FEXHE undersigned is authorised, under a resolution the Board of Directors of the Exchange Bank of Virginia, to open tooks of subscription for the residue of the stock of the institution, in which the present stockthe 15th August next. \$10 per share to be plate until time of subscribing, the remainder on the 30th day of August, in cush or in stock notes at 60 days.

20-tl5A Stantondale Springs, in Jefferson county, Va., 5 miles

from Charlestown

[TWILLS agreeable and benutrial Watering Place is now prepared to receive Visiters The Company have tecently made various improvements suggested by the of the last year being found insufficient for the number proved and embellished. Besides the W rm Baths, which will be much improved, large Floating Baths are being constructed, calculated to furnish the most delightful river bathing both for ladies and gentlemen.

The surpassing beauty of these Springs, s great hend of the mujestic Shennadoah River, at the foot of the Blue Ridge Mountain, as well as the long established superiority of the waters, need not again be more than adverted to. These, together with its great facility of access from Baltimore, Philadelphia, the Dis-&c., by Railroad and Canal, render it one of the most agreeable, healthful and convenient resorts daring the heats of Summer.

Competent Managers, Servants, Music, Pleasure and Fishing Boa's, &c , are provided, and the Company assure the public that no effort or expense will be spared to render their Establishment equal to any other, either for gentrel accommodation, rational amusement, or healthful enjoyment.

These Springs are reached in a day's ride from Baltimore or Washington, by the Railroad to Charlestown, from which place comfortable Coaches with safe drivers and horses, belonging to the Company, will convey travellers to the Springs, a distance of 5 miles, over an easy road and through a most brautiful and fertile country, arriving there before sunset.

THE PROPRIETORS.

Ten Dollars Reward. AN away from the subscriber, residing in the lower part of Powhatan county, on the Buckingham road, a negro girl named POLLY, in her sixteenth year, common size, round face, teeth uncommonly white and good, tolerably long bushy hair, and toes turning inward more than usual. I have reasons to believe that she is either in the neighborhood of the Powhatan Pits, or in Goochland county, perhaps, near the Court-house, as the has many acquaintances thereabouts. The above reward will be given to any person delivering said negro to me, or confining her in Jail, not neglecting to give me immediate notice thereof —I will also, in addition, pay necessary and reasonable expenses. My Post Office is Hallshore', Chesterfield County

Virginia Baptist Education Society.

progress to completion. ton City and the Springs, leaving each place early in the morning, and arriving at the Springs at 4 o'clock, and A New and Important Invention. at Washington in time for the Baltimore cars of the same M M KEEVER'S day. This line continues to Louisa Courthouse daily, GRAIN THRASHING AND CLEANING MACHINE. branching at Orange Courthouse and running thence

his newly invented Machine for thrashing and cleaning wheat, tye, onts, and all other kinds of small grain, is now prepared to furnish them to all who may wish to purchase. He can recommend them to the state of th as possessing many decided advantages over all other ma chines now in use. He has several now in successful operation, and all who have had them in use, or have seen them, without hesitation give them a decided preerence to all other machines with which they are ac quainted. This machine may be worked with 4 or 5 iorses, and when properly attended, will thrash and clean, age of 21 years, or a marriage portion for a daughter, ready for market, from 3 to 400 bushels of wheat per day; and one of the many advantages it possesses over all Throshing Machines now in use, is, the vast saving of labor and time-for, it only requires the same force to thrash, clean and measure up the grain for market, that other machines require to perform the single operation of thrashing. Four or five horses and ten hands will throsh, clean and measure up from 3 to 400 bushels of wheat per day, and rick the straw. The public are respectfully invited to examine the machine. It may be seen at his shop in Staunton, where he is prepared to furnish them ready made, of the best materials, and the most approved work manship-And he intends to have a machine in operaion, in the vicinity of Richmond, some time in the month of July-the time and place of operation will be made

The subscriber will sell State, County or single rights, on the most accommodating terms. All orders will be thankfully received, and promptly attended to, post paid. The subscriber hereby forewarns all persons from king or using his Machine, or using any part of it to any other machine, without his approbat MATTHEW M'KEEVER, Patentec.

Certificates. We, the undersigned, cerufy that we have had Mr. Mat thew M'Ke-ver's newly invented patent Thrashing and Cleaning Machine in use on our farms, and we thrashed and cleaned from two hundred and fifty to three hundred bushels of Wheat per day, with the same number of hands and horses that we have to work the common thrashing machine heretofore-and we consider this ma chine one of the greatest time saving and labor saving machines we have ever had in use. We consider it a thods of instruction will conform as nearly as practicavaluable improvement, and recommend it to the public GEORGE W. CRAWFORD,

SILAS H. SMITH, W. J. D. BELL, JAMES BELL, D. W. PATTESON.

STAUNTON, Jan. 12, 1839

We, the undersigned, have examined Mr. M M'Kee ver's newly invented patent Thrashing and Cleaning Mathine, and consider it a valuable improvement. labor saved by it in cleaning the grain as it is thrashed, lotte, in which you are plaintiffs; and Samuel S. Fuqua, without any additional force, is an advantage well worth the consideration of farmers. We fully concur in the quantity thrashed, with the above gentlemen, and we Duke, Esq , Stony Point, Albemarle county. have no doubt more could have been thrashed unde more favorable circumstances.
